

**SANYO**

E-0070

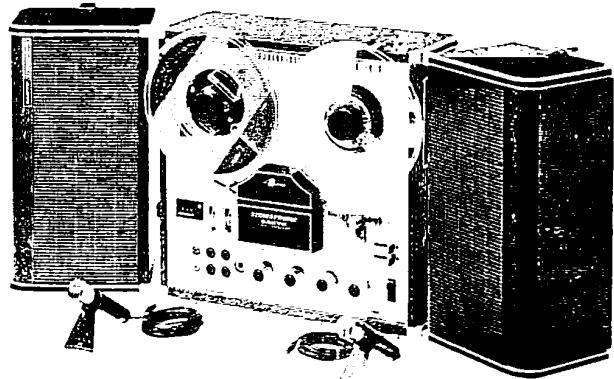

All-transistor Stereophonic/Monaural  
Tape Recorder

## MODEL

# MR-929MK-II SERVICE MANUAL

SANYO ELECTRIC CO., LTD.

INTERNATIONAL DIVISION : SANYO ELECTRIC TRADING CO., LTD.  
OSAKA, JAPAN.

## SPECIFICATIONS

|                                     |   |
|-------------------------------------|---|
| Recording System .....              | AC bias 1/4 track mono & stereo-phonics   |
| Erasing System .....                | AC erasing 1/4 track  |
| Tape Speed .....                    | .7-1/2 ips (19 cm/sec.)<br>3-3/4 ips (9.5 cm/sec.)  |
| Used Transistor .....               | .2SB400 × 2<br>.2SB186 × 4<br>.2SB187 × 4<br>.2SB492 × 4  |
| Other Elements .....                | .1S188 × 2<br>.1S1849R × 1  |
| Heads (each one) .....              | .1/4 track recording-playback head<br>1/4 track erasing head  |
| Power Output .....                  | Maximum output 4W<br>Music output 6.5W  |
| (each channel)                      | 20 - 19000 Hz (at 7-1/2 ips)<br>30 - 12000 Hz (at 3-3/4 ips)  |
| Frequency Response.....             |   |
| Speaker .....                       | Permanent dynamic speaker Imp. 8 ohms.  |
| Microphone .....                    | Dynamic microphone  |
| Recording Indicator .....           | .VU meter   |
| Recording Input Terminal .....      | .MIC. × 2 Imp. 70K ohms.<br>.AUX. × 2 Imp. 100K ohms.   |
| Output Terminal .....               | .Ext. Sp. × 2 Imp. 8 ohms.<br>Line out × 2 Imp. 1K ohms.<br>Headphone × 1 Imp. 10K ohms.                            |
| Motor .....                         | 4 pole induction motor  |
| Rewind Time .....                   | Up to 3 minutes at 1200 Ft tape   |
| Forward Time .....                  | Up to 3 minutes at 1200 Ft tape   |
| Power Source &<br>Consumption ..... | 100, 117, 125, 220, 240V, 50/60 Hz 40W  |
| Dimension & Weight .....            | Main 13" (W) × 5-1/2" (D) × 12-3/4" (H)<br>Speaker 6-1/2" (W) × 5-1/4" (D) × 12-3/4" (H)<br>Approx. 38 lbs. (17 Kg) |

## REMOVING MECHANISM FROM CABINET

In order to repair the mechanism or amplifier, it is necessary to remove the recorder unit from the cabinet. To remove, observe the following instruction:

- 1) Remove two volume control knobs, two tone control knobs by pulling upward. Remove two recording knobs unscrewed and pulling upward. And, remove operating lever knob by turning counter-clockwise.

- 2) Turn the recorder to normal position and remove four philips screws at the four corners of upper panel and a screw in the head housing
- 3) Turn the recorder upside down and remove five philips screw at the bottom and two philips screw at the side of cabinet  
Above procedure will permit the removal of mechanism and amplifier from the cabinet.

## ADJUSTMENT OF MECHANISM

When inadequate operation is noticed in fast forward or rewinding, or when unusual slackening of tape occurs at the time of changing (switching) from stop to play, or when improper tension is noted on the tape in each operation, while the tape recorder is operating properly otherwise, the following adjustments are required.

### 1) Measuring Equipment.

Although no measuring equipment or tool is required, tension gauge (500g with 20g scale, 2kg with 100g scale) will be useful after adjustment.

### 2) Brake Mechanism.

For operation at regular speed (record-playback) and for changing from fast forward to stop the brake should apply strongly to feed reel base and weakly to takeup reel.

Turn the adjusting screw to adjust contact to the reel base. (See Fig. 1).

When the brake doesn't apply, it causes an opening of over 0.5mm between reel base and brake shoe. Therefore, the brake shoe should touch the reel base smoothly.

### 3) Fast Wind Mechanism.

There must be no aperture between the take-up reel base and the screw for fixing takeup reel base. Should there be an aperture of fast winding, it is necessary to change the nylon washer to a thicker one, or to move the lever upward a little to uphold the fixing metal so that the pressure between reel base and pulley becomes satisfactory (See Fig. 2).

Check the rotation of feed reel base. After completing this adjust-

ment, function 'Rewind' and 'Playback' and check for defective operation and unusual noise.

### 4) Rewind Mechanism.

If the nut (1) is worn out, the rewinding roller pressure against feed reel will increase gradually. Tighten nut (2) so that the rewind operation can be completed within 3 minutes for a full 7" reel tape. After making this adjustment, tighten the nut (2) to clamp the nut (1). This will be followed by lacquer fixing. Check the tension of takeup reel base, contact between brake and reel base, and also for unusual noise.

Note: Pay particular care when shifting the operating lever so that its position will be correct (See Fig. 3).

### 5) Playback Mechanism

Pressure between the pinch roller and capstan (flywheel shaft) is to be gauged; satisfactory tension is between 650 to 950g. To take the reading, playback the tape at 9.5cm (3-3/4in)/sec. speed, then pull the pinch roller toward you until tape stops and read the tension gauge. This process should be repeated two or three times, and adjustment is made with coil spring (See Fig. 4).

### 6) Adjusting Pad

The felt should be placed so that it will come into contact with the head core slit right angle and that the center of the felt properly meets the core slit section. The felt should firmly contact the entire width of the tape. The pressure between the pad and head should be measured; satisfactory tension is between 20 to 25g.

## MAINTENANCE

### 1. Oiling (Lubrication)

When excessive oil supplied, it may overflow along the shaft and adhere to the rubber parts of the belt and pinch roller, causing slipping, wow or flatter. Care should be taken to limit the amount of oil applied or on how to oil.

### 2. Oiling Parts.

Pinch Roller (Fig. 5). Flywheel Shaft (Fig. 6).

Rewind Roller (Fig. 7). Motor

Reel Base and Reel Base Pulley (Fig. 8). Counter and Pulley, Idler

### 3. Oiling of Other Parts.

Oiling of the revolving parts is mentioned above. It is essential to clean and oil metal-to-metal contact shaft and bearing of each lever at least once a year.

### 4. Cleaning of the Tape Transport Sections.

The tape travels from the feed reel to pinch roller through two tape guides, erasing head, recording head, pad, tape guide and capstan.

When dust or ferrous powder on the tape adheres to these parts, insufficient erasing, non-recording, poor high tones, less volume and slipping may result. Utmost care should be taken to clean these parts.

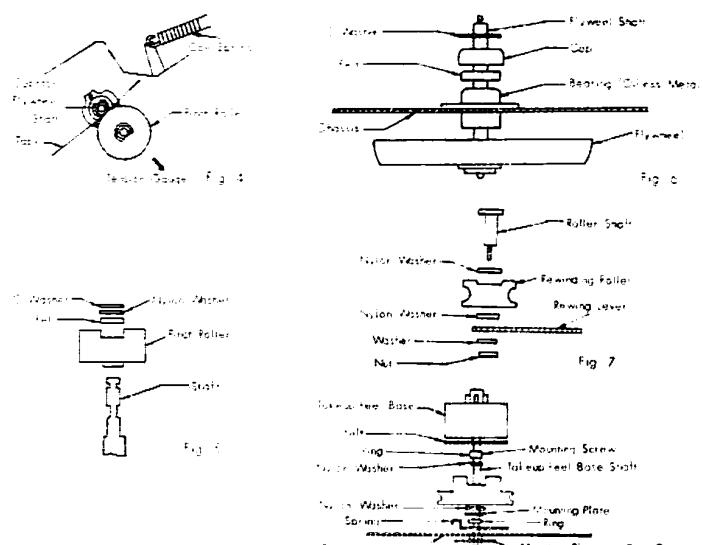

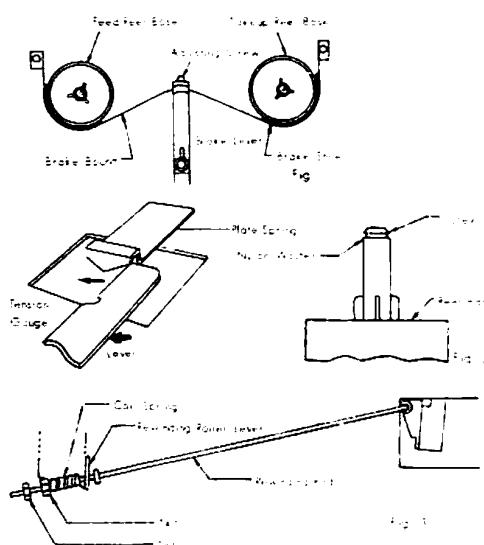

Parts such as tape guide, each head, pinch roller and capstan should be thoroughly cleaned with a soft cloth or gauze soaked in carbon tetrachloride.

### 5. Oiling of Rotating Parts.

All rotating parts of this set are of oil-less metal, except for reel spindle, rewind roller, and fast forward roller. To insure smooth functions, oil-less metal parts are sealed from exposition to air. Accordingly, these parts must be disassembled before applying lubricant.

### 6. Storing

Before closing the lid of tape recorder ..... after operation or when storing ..... make sure the control is set to "STOP" position.

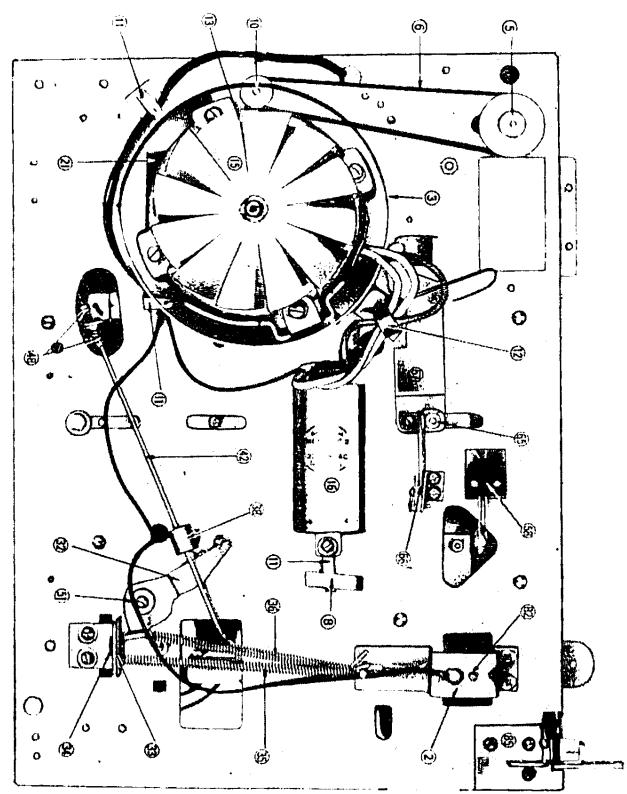

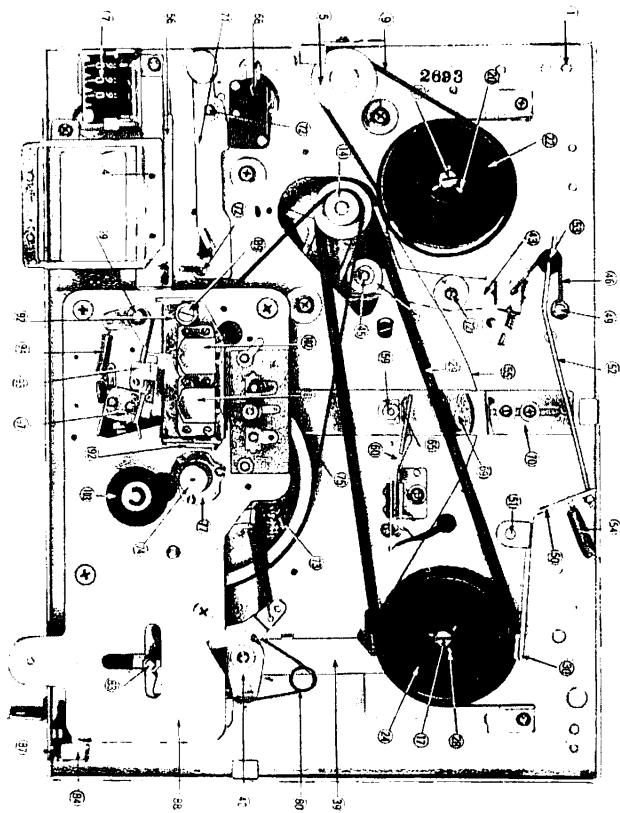

## MECHANICAL TROUBLE CHART

| SYMPTOM                   | CAUSE  | REMEDY  |
